EDUCATION

Delhi Technological University (DTU), New Delhi 2024 – 2028

B.Tech, Mathematics & Computing

EXPERIENCE

Growthvine Capital, Gurgaon | AI & Automation Intern May 2026 – Present

SEBI-registered mutual fund advisory (ARN-189602)

- **Architected** Growthvine's **entire tech infrastructure and AI integration** for **280+ clients**, covering **~9,000 mutual funds** with NAV history since 2019.
- **Cut** advisors' fund research and proposal drafting **from hours to minutes** with a **Go data API** (AWS ECS/ALB, RDS PostgreSQL, Redis) that serves **4 products** and an **MCP server** for Claude/ChatGPT. Lowered latency through Redis caching and query tuning.
- **Reduced** monthly portfolio-review work **from ~hours per client to minutes for all 280 clients** by automating reports (FastAPI, React, S3, ECS Fargate) with rupee-reconciled attribution and password-protected PDF emails.
- **Lowered** the ECS bill by **~30%** by re-architecting AWS into **event-driven distributed services** (scheduled Fargate batch jobs, S3 + CloudFront frontends, SQS-to-Lambda PDF workers).
- **Replaced** per-app logins with **one SSO** (login.growthvine.in, JWT/JWKS) for web and mobile, and merged separate frontends into **one client platform** (app.growthvine.in). Built the **OAuth2** service (RS256, introspection, rate limiting).
- **Moved** portfolio monitoring **from manual spot checks to continuous automated coverage of all 280+ clients** via a rules engine, fed by **4 daily fund-data pipelines** (AMFI/NSE/MINT ingest, calculation, ranking, benchmarks) provisioned with **Terraform**.
- **Condensed** financial planning **from multiple advisor meetings into one digital session** with risk profiling (AES-256 mfCentral consent, SHA-256 consent records). Authored the **SEBI CSCRF** security design.

LLM4S (open-source Scala/JVM LLM library) | Open Source Contributor 2025 – Present

- **Debugged** streaming resource leaks in GeminiClient/OpenRouterClient that risked connection exhaustion (**PR #663**), and added a StabilityAI text-to-image provider (**PR #691**: HTTP client, validation, error mapping, **11 unit tests**) in object-oriented (OOP) Scala; both merged after code review.

PROJECTS

Samanvay: Government Interoperability Platform Java 21, Spring Boot, Keycloak, PostgreSQL, React | SIH 2026

- **Designed** a federated platform (SIH26129) for departments to share citizen data without centralising it, with the **system design** documented as per-module HLD and LLD. The platform holds only identity links, consent, workflow and audit records.
- **Implemented** a **9-module Spring Modulith** backend (Flyway, Flowable workflows, Resilience4j-guarded connectors), Keycloak auth (passkey/TOTP for staff, email code for citizens), an identity-match reviewer queue and a React staff console.

Autonomous Options Trading Agent Python, Alpaca API, SQLite, Claude API, MCP, Linux/systemd

- **Engineered** an LLM-driven options agent trading through the **Alpaca API** (live market data, limit orders, exits, daily broker reconciliation) behind **12 deterministic risk checks** it cannot override (position-sizing limits, restricted tool access), with **268 automated tests**; deployed via systemd.

Support Triage Agent Python, FastAPI, FAISS, BM25

- **Developed** a **7-stage** ticket-triage pipeline over **774 documents (3,800 chunks)**, fusing FAISS and BM25 retrieval via reciprocal rank fusion with cross-encoder reranking. A risk classifier escalates fraud, security and outage tickets, with model failover.

TECHNICAL SKILLS

Languages: Go, Python, Java, Scala, C++, SQL, TypeScript

CS Fundamentals: Data Structures & Algorithms, OOP, system design, debugging, performance/latency optimization

Backend & Data: REST APIs, microservices, FastAPI, Spring Boot, OAuth2/JWT, RAG, MCP, PostgreSQL, Redis, data modeling

Cloud & DevOps: AWS (EC2, ECS, Fargate, Lambda, SQS, RDS, ALB, S3, CloudFront), Terraform, Docker, Git, Linux

ACHIEVEMENTS & LEADERSHIP

- Cleared the Qualifying Round of **The Big Code 2026 by Google** (**top 15,000 nationally**); selected for **Smart India Hackathon 2025** at DTU (JalSetu, ML-based water-quality monitoring).
- Certificate of Excellence, **HackerRank Orchestrate** (May 2026): ranked **230th**, AI Agent track.
- Solved **100+ Data Structures & Algorithms (DSA) problems** on LeetCode.
- **Alpaca AI Trading Agents Hackathon** (lablab.ai), Aug – Sep 2026.
- Author, “Building in Production” LinkedIn newsletter on infrastructure and systems work; Co-Head, E-Cell DTU; Logistics Head, Rotaract Club DTU Regency (District 3011).
